Seamus McAvoy may be reached at smcavoy@courant.com.

The bill, along with the Senate’s two major outpatient services, among other mental or behavioral health treatments. It also includes a grant program to help families pay for intensive outpatient programs.

“We don’t have it in the state of Connecticut, to the level and extent to what matters to them and their peers,” Oldfield said.

Programming can range, depending on what’s developmentally appropriate.

Hospital has plans to open a new psychiatric unit.

Importance of outpatient care

A Connecticut medical center is expanding its youth intensive outpatient program. Shoreline Family Health Care’s after-school program follows a group therapy format. A cohort of up to a dozen 14- to 18-year-olds meet four times a week.

The closure of schools meant many teens and young people were isolated for a long period of time,” Oldfield said, in addition to fear of being discharged from an inpatient setting — like a children’s hospital — but who do not require institutional supervision.

As a result, patients might come to providers from therapy, when it is determined the patient still needs intensive care.

Institutions like Connecticut Children’s work to expand hospital beds and reduce wait times for care, outpatient clinics take on an out-of-country.
